

Laboratory Activity 5

Linux Commands

Objectives:

At the end of the exercise, the students should be able to:

- Determine the function of each command syntax in Linux Terminal.
- Demonstrate the output of each command in Linux Terminal CLI.

Software Requirements:

- VirtualBox for Windows
- Ubuntu ISO
- Internet
- Microsoft Office Word

Principles:

A shell is a program that receives commands from the user and gives it to the OS to process, and it shows the output. Linux's shell is its main part. Its distros come in GUI (graphical user interface), but basically, Linux has a CLI (command line interface). A Linux console terminal is one of the system consoles provided in the Linux kernel. The Linux console terminal acts as the medium for input and output operations for a Linux system. A Linux console terminal is similar to a command line in Microsoft Windows, but it differs in that it can perform any operation on the system.

Procedures:

1. Run VM VirtualBox and emulate Ubuntu virtual machine. Search and open the GNOME Terminal.
2. Create a Word document on your Windows PC (outside VirtualBox). Take screenshots of each key-in command presented and place them in your document.

a. <code>cd /</code> ↵ <code>ls</code> ↵	b. <code>chmod a+x ./<YOUR SURNAME></code> ↵
c. <code>cd ~</code> ↵ <code>ls</code> ↵	d. <code>ls -l</code> ↵
e. <code>mkdir <YOUR SURNAME></code> ↵ <code>cd ~/<YOUR SURNAME></code> ↵ <code>cd ..</code> ↵ <code>ls</code> ↵	f. <code>sudo apt-get install emacs</code> ↵
g. <code>tree</code> ↵	

3. Username in your account should be visible in all screenshots.
4. Properly label each performed command.
5. Save the document as **Lastname_Lab_Act065.docx** in your Windows folder and Turn In your output in Google Classwork Activity.
6. Delete the created folder in Windows.

GRADING RUBRIC:

Point	Description
76 – 100	All the screenshots are present in the document and show the correct output.
51 – 75	The results of the <code>ls</code> command upon placing <code>top</code> in the background and returning <code>top</code> to the foreground are incorrect. The output of the <code>jobs</code> command is incorrect.
26 – 50	The screenshots for results of the <code>ls</code> command upon placing <code>top</code> in the background and returning <code>top</code> to the foreground are missing in the document. The output of the <code>jobs</code> command is incorrect.
1 – 25	One (1) or two (2) screenshot(s) show the correct output.
0	No output
