

# **TYPES OF WEB HOSTING**

# 1. Shared Hosting

In shared hosting, **multiple websites share the same physical server and resources** (CPU, memory, storage). It's the most common and cost-effective option for beginners and small businesses.

## ❑ Features:

- ❖ Cheapest hosting type (as low as \$1–\$3/month)
- ❖ Limited control and customization
- ❖ Provider manages maintenance
- ❖ Usually includes cPanel

# 1. Shared Hosting

## □ Use Cases:

- ❖ Personal blogs
- ❖ Portfolios
- ❖ Small static business websites

## □ Drawbacks:

- ❖ Slower performance if other sites on the server consume high resources.
- ❖ Security risk—a vulnerability in one site may affect others.

**Example Providers:**

**Hostinger Basic Plan, Bluehost Shared Plan**

## 2. VPS Hosting (Virtual Private Server)

VPS hosting uses **virtualization** to divide one physical server into **multiple virtual servers**. Each user gets a dedicated portion of server resources, giving more power and control.

### ❑ Features:

- ❖ Mid-range cost (\$5–\$20/month)
- ❖ Root access for software installation
- ❖ Better speed and stability than shared hosting
- ❖ Users manage their own server (unless managed VPS)

## **2. VPS Hosting (Virtual Private Server)**

### **□ Use Cases:**

- ❖ Medium traffic websites**
- ❖ SaaS apps**
- ❖ WordPress with high plugins**
- ❖ Sites needing custom software**

### **Example:**

**A freelance developer hosting client sites with isolated environments.**

### 3. Dedicated Hosting

A dedicated server gives you **exclusive use** of an entire physical machine. It offers **maximum control, performance, and security**.

#### □ Features:

- ❖ **High cost (\$80–\$300+/month)**
- ❖ **Full control of server environment (OS, software, firewall)**
- ❖ **Ideal for mission-critical applications**

# 3. Dedicated Hosting

## □ Use Cases:

- ❖ High-traffic ecommerce platforms
- ❖ Financial services websites
- ❖ Corporate portals

## □ Drawbacks:

- ❖ Requires server admin expertise
- ❖ Overkill for small or medium sites

## Example:

**Amazon may use dedicated hosting for secure financial data processing.**

## 4. Cloud Hosting

Cloud hosting distributes your website across **multiple servers (nodes)** in the cloud. It is **scalable, flexible, and highly available**, ideal for modern web applications.

### ❑ Features:

- ❖ Pay-as-you-go pricing
- ❖ On-demand scaling (more CPU/memory if needed)
- ❖ Redundancy — if one server fails, another takes over

## 4. Cloud Hosting

### □ Use Cases:

- ❖ Growing startups
- ❖ SaaS applications
- ❖ Applications with inconsistent traffic spikes

### Example Providers:

**Amazon Web Services (AWS), Google Cloud, DigitalOcean**

## 5. Managed Hosting

In managed hosting, the **host handles all the server-related tasks** (updates, monitoring, backups, scaling). It can apply to shared, VPS, or cloud servers.

### □ Features:

- ❖ No need for technical knowledge
- ❖ Automatic security patches and updates
- ❖ Often used for WordPress Managed Hosting

## 5. Managed Hosting

### □ Use Cases:

- ❖ **Entrepreneurs, bloggers, small teams**
- ❖ **Non-technical users who want to “set and forget”**

### **Example:**

**Kinsta or WP Engine for managed WordPress hosting.**

## 6. Reseller Hosting

Reseller hosting allows you to **sell hosting services** under your own brand. It's ideal for **web agencies** who build sites for clients.

### □ Features:

- ❖ Control panel for clients
- ❖ White-label branding
- ❖ Custom hosting packages

### Example:

**A web designer selling hosting plans to clients for recurring revenue.**

# **ACTIVITY 1**

# **Types of Web Hosting**

- 1. What is shared hosting?**
- 2. What hosting type uses virtualization to divide a physical server?**
- 3. T/F: Dedicated hosting allows you to host multiple sites for different clients.**
- 4. What is the major benefit of cloud hosting?**
- 5. List two features of managed hosting.**

# **Types of Web Hosting**

- 6. What is the best hosting type for a low-budget beginner?**
- 7. Name a hosting type that requires server administration skills.**
- 8. What is the major limitation of shared hosting?**
- 9. Explain one real-world use case for VPS hosting.**
- 10. What does a reseller hosting plan allow you to do?**

# **ACTIVITY 2**

# Hosting Plan Decision Tree

**Task: Use the following website scenarios and decide the best hosting type for each. Justify your choice (at least 2–3 sentences).**

| Scenario                                             | Choose Hosting Type | Why? |
|------------------------------------------------------|---------------------|------|
| 1. Personal resume website for a student             |                     |      |
| 2. Online shop with 5,000+ daily visitors            |                     |      |
| 3. A blog about photography, with many image uploads |                     |      |
| 4. Startup app with uncertain traffic                |                     |      |
| 5. A small business website with low budget          |                     |      |
| 6. A freelancer managing 10 clients' websites        |                     |      |

# **ACTIVITY 3**

# Hosting Provider Research

| Provider           | Shared Price | VPS Price | Cloud Price | Free Domain | Storage | Uptime |
|--------------------|--------------|-----------|-------------|-------------|---------|--------|
| Example: Hostinger | \$2.99/mo    | \$5.99/mo | \$9.99/mo   | Yes         | 50GB    | 99.9%  |

**Write a short paragraph on which provider you'd recommend and why.**
